How to View Grades in webCampus

The Grades area for a student displays the User report and the Overview report. The User report generally shows a student’s grade in either a numerical, text, or percentage format in addition there is also an area to view feedback. An individual user can view their grades by following the steps below.

Login to webCampus and locate your course.

Locate the Administration block and click Grades.

View grades for all graded Activities.

Clicking on the name of an activity will direct you to the activity page in the course with the exception of grade items, indicated by the gray checkbox symbol, which are not linked to an online course activity.

Note about Attendance Points for campus-based courses:

If your instructor factors attendance into your grade, attendance points are recorded differently from other activities. Your score will reflect your current points so far, not your eventual points. As long as you attend class every day, you will maintain 100% of the total points for attendance—BUT as soon as you miss a class, your points will drop accordingly. The only way to continue to earn full credit for the attendance activity is to continue to attend class.

The range column subtotal displays the total points possible or the weighted grade value depending upon the grading criteria.
